PROFILE

I am technical member with a demonstrated history in the computer software industry. Seeking for a good opportunity of Full-Stack DotNet Development. Highly experienced in Web Solutions , built enterprise and integrated web systems, experienced in web services, integrations, optimization and deliver in time.

Education

- BS** **Helwan University**, Computer and Artificial Intelligence Sept 2015 – May 2019
- GPA: 2.82
 - Grade: Very Good
 - **Major:** Computer Science Department
 - **Minor:** Information System Department

Experience

- Electronic Government Authority RAK**, Backend Developer(Squad leader) Cairo, Egypt
Mar 2025 – Present
- Led a squad, coordinated deliverables, and aligned progress with business goals.
 - Designed and developed microservices-based solutions, ensuring scalability and modularity.
 - Worked with NoSQL databases (Cosmos DB) for high-performance data storage and retrieval.
 - Implemented event-driven architectures using Kafka and message bus systems.
 - Conducted code reviews to maintain quality standards and enforce best practices.
 - Delegated and split tasks effectively among team members to maximize productivity.
 - Collaborated closely with the UX team and actively participated in cross-functional meetings.
 - Partnered with the DevOps team to troubleshoot and resolve infrastructure challenges.
 - Played a key role in sprint planning, workload distribution, and agile ceremonies.
 - Took ownership of initiatives requiring senior-level problem solving and decision-making.
- Oasis Computer System**, Software Engineer Cairo, Egypt
Oct 2023 – Mar 2025
- Build Back- End Structurer, API's Projects .NET Core, SOLID P, Design Patterns, Clean Architecture , Repository Pattern , Auto Mapper , Fluent Validation , Identity , JWT , REfresh Token ... and more)
 - Deploy program and evaluate user feedback.
 - Collaborate with team members to deliver high quality solutions.
- FREELANCER**, .Net Developer Cairo, Egypt
Jan 2023 – Sep 2023
- Delivered many back-end tasks in Dotnet.
 - Built different tasks in .Net (GYM, School and Café).
 - Built .Net Projects (Real State, Hotel System, Restaurants and Cafe).
 - Experienced about Teamwork. Deliver Task Time, Agile Methodology and Software development life cycle.

- Develop demo ecommerce website that able customers to order their needs on-line.
- Develop and enhance shop system that make bill and discount from inventory.
- Create user manual and software documentations.

.Net Course (ITShare) , .Net Developer

- Completed an intensive .Net development diploma program focused on .NET technologies at IT Share. Developed proficiency in designing, building, and maintaining robust back-end systems using the .NET framework. Acquired skills in database management, API development, and system integration, preparing for a career as a professional .Net developer.
- Developed and Implemented Backend tasks throughout the work environment.
- Worked with reusable applications to enhance performance and user experience.

Cairo, Egypt
Mar 2022 – Sep 2022

Projects

Google Calendar API Integration

- Developed a robust application integrating Google Calendar API to enable efficient event management (add, edit, delete).
- Implemented OAuth 2.0 authentication for secure user authorization, ensuring data privacy and integrity.
- Designed API endpoints and user-friendly interfaces for seamless interaction with Google Calendar services.
- Utilized .Net for backend development, enabling scalable and maintainable code.

Mini Store Backend

- Designed and implemented a backend system to support small stores in managing clients, transactions, and billing.
- Developed RESTful APIs for client management, bill generation, and transaction tracking.
- Integrated discounting mechanisms.
- Technologies used: Asp.net Core, Rest API, SQL Database Server, Entity framework (code first), LINQ.

Store System (Full eCommerce Website)

- Built a full-stack eCommerce platform using MVC architecture, enabling product management, user roles, and order processing.
- Developed dynamic features for adding, editing, and displaying products with detailed information.
- Implemented role-based access control to manage user privileges (e.g., admin, manager, customer).
- Enabled order status tracking and seamless checkout workflows for customers.
- Technologies used: Asp.net Core MVC, SQL Database Server.
